REPORTS ON POPULATION

SIXTEENTH CENSUS OF THE UNITED STATES: 1940

- I. Number of Inhabitants, by States.
- II. Characteristics of the Population, by States.
- III. The Labor Force—Employment, Unemployment, Occupation, Income, by States.
- IV. General Report on Population.
- V. Internal Migration.
- VI. Families.
- VII. Supplementary Report—Fertility, Parentage, Mother Tongue, Veterans, etc.
Statistics for Census Tracts (Including Housing Data).
Special Reports.

(List tentative, subject to revision)

HAWAII AND NEARBY ISLANDS

The following islands had no population in 1940: Gardner Pinnacles, Kaula, Kure (Ocean), La Perouse Pinnacle, Laysan, Lisianski, Maro Reef, Necker, Nihoa, Pearl and Hermes Reef.

Palmyra Island, not shown on this map, is located approximately 1,050 miles SSW. of Honolulu (Oahu Island), in lat. 5°52' N., long. 162°06' W.

HAWAII

NUMBER OF INHABITANTS

Population of the Territory.—Hawaii, by voluntary action of its people, ceded its sovereignty to the United States in 1898 and was organized as a Territory on June 14, 1900. The population of Hawaii on April 1, 1940, according to the Sixteenth Census, was 423,330,¹ which represents an increase of 54,994, or 14.9 percent, as compared with the population of 368,336 on April 1, 1930. The total land area of the Territory, as shown in table 3, is 6,420 square miles. The average number of inhabitants per square mile in 1940 was 65.9, as compared with 57.4 in 1930.

Table 1 shows the population of Hawaii from 1832 to 1940, together with the increase or decrease during each intercensal period. The figures shown for the period from 1832 to 1896 are from censuses taken under the direction of the Hawaiian Government. The census of 1900 and subsequent censuses were taken under the direction of the Bureau of the Census at the same time as the regular decennial censuses of the continental United States.

TABLE 1.—POPULATION OF HAWAII: 1832 TO 1940

[Includes population of the following outlying Pacific islands not under the jurisdiction of the Territory of Hawaii: Baker, Canton, Enderbury, Howland, Jarvis, Johnston, and Midway. Censuses prior to 1900 taken under the direction of the Hawaiian Government. Exact data not available for censuses prior to 1800. A minus sign (—) denotes decrease]

CENSUS YEAR	Population	INCREASE OVER PRECEDING CENSUS	
		Number	Percent
1940 (Apr. 1)	423,330	54,994	14.9
1930 (Apr. 1)	368,336	112,424	43.0
1920 (Jan. 1)	265,012	64,003	33.4
1910 (Apr. 15)	191,000	37,998	24.6
1900 (June 1)	154,001	44,081	41.3
1890 (Sept. 27)	100,020	10,080	21.1
1890 (Dec. 28)	80,900	0,412	11.7
1884 (Dec. 27)	80,578	22,503	39.0
1878 (Dec. 27)	57,985	1,088	1.9
1872 (Dec. 27)	56,807	-6,002	-9.6
1866 (Dec. 7)	62,950	-6,841	-9.8
1860	69,800	-3,338	-4.6
1853	73,138	-11,027	-13.1
1860	84,105	-24,414	-22.5
1850	108,570	-21,734	-16.7
1832	180,313		

¹ This figure includes the population (600 persons) of the following outlying Pacific islands: Baker, Canton, Enderbury, Howland, Jarvis, Johnston, and Midway. These islands, although not under the jurisdiction of the Territory of Hawaii, are included with it for census purposes. Wake Island, also a Pacific possession of the United States, had no permanent inhabitants on April 1, 1940.

Geographic subdivisions.—In tables 2 to 4 the population of Hawaii is shown by counties, islands, districts, cities, towns, and villages, with some comparative figures for previous censuses. The districts shown in table 4 are judicial districts. Data for census tracts are presented in table 5 and for representative districts in table 6.

Cities of 5,000 or more.—Six urban places in the Territory had a population of 5,000 or more in 1940 and for purposes of census classification are designated as "cities." This classification of urban places in Hawaii has been adopted because none of the urban places are incorporated, and none have local governments other than those of the counties of which they are a part. These places have no legally established boundaries, and it was necessary, except in the case of Honolulu city, for enumerators to determine for each dwelling place whether it was locally considered a part of the urban place. In the case of "Honolulu city," the area so designated comprises Honolulu district exclusive of Palmyra Island. This practice conforms to local usage and corresponds to the designation used in previous censuses.

TABLE 2.—POPULATION OF CITIES OF 5,000 OR MORE FROM EARLIEST CENSUS TO 1940

[All cities shown in the table are unincorporated]

CITY AND CEN-SUS YEAR	Popu-lation	INCREASE OVER PRECED-ING CENSUS		CITY AND CEN-SUS YEAR	Popu-lation	INCREASE OVER PRECED-ING CENSUS

¹ Honolulu district exclusive of Palmyra Island.

NUMBER OF INHABITANTS

Counties and islands.—Table 3 shows the population of the four counties of Hawaii from 1920 to 1940, together with the land area of each and its population per square mile in 1940. Similar figures are presented

also for the islands which are included in the various counties. The islands which constitute each county are indicated in footnotes to table 3.

TABLE 3.—AREA AND POPULATION OF COUNTIES AND ISLANDS: 1920 TO 1940

[A minus sign (−) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100. Population per square mile not shown where less than 0.1 or where area is less than 10 square miles]

Johnston	(6)	60					
Midway	2	437		30	31		

¹ Coextensive with Hawaii Island.

² Includes Oahu Island, Palmyra Island, and outlying islands. The legal designation of this area is "City and County of Honolulu." The designation "Honolulu County" has been adopted for census purposes in order to avoid confusion with the area designated as "Honolulu city."

³ Includes Kauai and Niihau Islands.

⁴ Includes Kahoolawe, Lanai, Maui, and Molokai Islands.

⁵ Included in Maui County total. Although officially designated as Kalawao County, this area consists of the Kalaupapa Leper Settlement; it has no local government and is controlled entirely by the Territorial Board of Hospitals and Settlement. For purposes of representation in the Territorial Legislature it is included with Maui County.

⁶ Area not available.

⁷ The outlying islands, although not under the jurisdiction of the Territory of Hawaii, are included, for census purposes, in the totals for the Territory and for Honolulu County.

Minor civil divisions.—The counties of Hawaii are divided into districts which are the administrative units for judicial, educational, taxation, and election purposes. Table 4 shows the population in 1940 of each county by districts, together with comparable figures for 1930 and 1920. The population of cities, towns, and villages is shown in table 4 in *italics* under

the districts in which the places are located. As indicated above, none of these places are incorporated. For the purposes of census classification, places with 5,000 or more inhabitants have been designated as cities; places with 2,500 to 4,999 inhabitants have been designated as towns; and places with fewer than 2,500 inhabitants have been designated as villages.

HAWAII

3

TABLE 4.—POPULATION OF COUNTIES BY MINOR CIVIL DIVISIONS: 1920 TO 1940

¹The districts shown in the table are judicial districts. All cities, towns, and villages are unincorporated. For changes in boundaries of districts, etc., between 1930 and 1940, see footnotes; for those between 1920 and 1930, see Reports of the Fifteenth Census (1930), vol. I, pp. 1241, 1242.

							Walluku city	7,519	6,098		

¹ HAWAII COUNTY.—Kapaau-Halaula (Kohala) village returned in 1930 as Kapaau village.

² HONOLULU COUNTY.—The legal designation of this area is "City and County of Honolulu." The designation "Honolulu County" has been adopted for census purposes to avoid confusion with the area designated as "Honolulu city." For census purposes, the outlying islands are returned with Honolulu County, although not under the jurisdiction of the Territory of Hawaii. Part of Wahiau district annexed to Ewa and Waialua districts, and part of Waialua district annexed to Wahiau district, in 1932.

³ MAUI COUNTY.—County total for 1920 includes population (607) of Kahawao district, returned separately, as Kalawao County, in 1930. Although officially designated as Kalawao County, this area consists of the Kalauapua Leper Settlement; it has no local government and is controlled entirely by the Territorial Board of Hospitals and Settlement. For purposes of representation in the Territorial Legislature, it is included with Maui County. Lanai district organized from part of Lahaina district in 1930. Part of Makawao district annexed to Walluku district, and part of Walluku district annexed to Makawao district, in 1932.

Census tracts.—At the 1940 census, population figures for census tracts were collected for the first time. Census tracts are small areas into which the Territory has been subdivided for statistical purposes, through cooperation with local committees made up of representatives of governmental and nongovernmental agencies. While this subdivision into tracts has been more or less arbitrary, several principles have been followed in general in laying out the tracts for the Territory. The tract areas are established with a view to approximate uniformity in population, with

some consideration for uniformity in size, and with due regard for natural barriers. Each tract is designed to include an area fairly homogeneous in population characteristics. In all cases the tracts have been laid out in such a way as to form subdivisions of districts. The tracts are intended to remain unchanged from census to census, and thus to make possible studies of changes in social and economic characteristics of the population within small sections of the Territory. The 97 tracts are grouped in table 5 according to the counties, districts, and cities in which they are located.

¹ Baker, Canton, Enderbury, Howland, Jarvis, Johnston, and Midway Islands.² Coextensive with Wailuku city.³ Coextensive with Kahawao County.

Representative districts.—The Territory is divided into six representative districts for purposes of representation in the Territorial Legislature. Table 6 shows

the population of each representative district in 1940 and 1930. The areas included in each representative district are indicated in footnotes to the table.

TABLE 6.—POPULATION OF REPRESENTATIVE DISTRICTS: 1940 AND 1930

REPRESENTATIVE DISTRICT ¹	1940	1930	REPRESENTATIVE DISTRICT ¹	1940	1930
Hawaii.....	423,390	368,336	District No. 4.....	112,310	82,607
District No. 1.....	53,033	51,748	District No. 5.....	146,386	120,316
District No. 2.....	20,243	21,577	District No. 6.....	35,818	35,942
District No. 3.....	55,980	56,146	Outlying Islands ³ :	560	—

¹ The areas constituting the several representative districts are as follows:

District No. 1.—Hamakua, North Hilo, Puna, and South Hilo districts of Hawaii County.

District No. 2.—Kau, North Kohala, North Kona, South Kohala, and South Kona districts of Hawaii County.

District No. 3.—Maui County.

District No. 4.—Parts of Honolulu (population 108,601 in 1940; 80,364 in 1930) and Koolaupoko (population 3,619 in 1940; 2,243 in 1930) districts of Honolulu County.

District No. 5.—Ewa, Kooleaola, Wahiauwa, Waianae, and Waianae districts, and parts of Honolulu (population 70,667 in 1940; 57,218 in 1930) and Koolaupoko (population 5,387 in 1940; 4,142 in 1930) districts of Honolulu County.

District No. 6.—Kauai County.

² Includes population (36) of Midway Island, returned in 1930 as part of District No. 5.³ Baker, Canton, Enderbury, Howland, Jarvis, Johnston, and Midway Islands, not included in any representative district.

CHARACTERISTICS OF THE POPULATION

INTRODUCTION

This second Population bulletin for the Territory of Hawaii presents data on the characteristics of the population, including sex, age, race, nativity, place of birth, citizenship, marital status, school attendance, highest grade of school completed, employment status, class of worker, occupation, industry, wage or salary income, and months worked in 1939. In the first Population bulletin, entitled "Number of Inhabitants," the total population of the Territory on April 1, 1940, was given for all of its political subdivisions, including counties, judicial districts, representative districts, census tracts, cities, towns, and villages. There remain to be presented for the Territory and for Honolulu city statistics on age by marital status, relationship to head of household, and education, data on occupation by age, wage or salary income, and class of worker, and on industry by race.

Arrangement of tables.—The tables in the present bulletin are arranged on the basis of the areas for which figures are presented. Tables 1 to 17 present statistics for the Territory as a whole and for Honolulu city. Tables 18 to 20 contain the figures for counties. Table 21 gives data by judicial districts and census tracts. Figures for cities of 5,000 to 100,000 are shown in tables 22 and 23. The amount of detail presented in this bulletin is generally greater for the larger places than for the smaller ones, and data from earlier censuses are presented for the larger areas only.

Availability of unpublished data.—The statistics in this bulletin presented for the Territory as a whole and for Honolulu city represent practically all of the data tabulated in this phase of the 1940 program. Although similar statistics have been tabulated for Hilo and Wailuku cities, and almost as much detail has been tabulated for counties and for Honolulu census tracts, it is not possible, because of space limitations, to publish the data in full detail.

These unpublished statistics, however, can be made available upon request, for the cost of transcribing or reproducing them. Requests for such statistics, addressed to the Director of the Census, Washington, D. C., will receive a prompt reply which will include an estimate of the cost of preparing the data.

EXPLANATIONS AND DEFINITIONS OF TERMS

Sex and race.—Because of the importance of the classification of the population by sex, practically all of the data in this bulletin are presented separately for males and females. Moreover, as far as feasible, the data are also presented by race. Seven major race classifications are distinguished in the tabulations; namely, Hawaiian, part Hawaiian, Caucasian, Chinese, Filipino, Japanese, and "other races," the latter comprising mainly Koreans and Puerto Ricans. In the 1940 census, several revisions were made in the race classification. Portuguese, Spanish, and "other Caucasian" were combined into one group, "Caucasian"; persons from Puerto Rico were classified as a separate group because of special interest in their number; and all persons of mixed Hawaiian and other blood were classified as part Hawaiian. All statistics in this bulletin classifying the population by race are in accordance with the 1940 definition. The complete classification by race, sex, and nativity is shown in the following table:

POPULATION OF THE TERRITORY BY RACE, NATIVITY, AND SEX: 1940

RACE	ALL CLASSES			NATIVE		FOREIGN BORN	
	Total	Male	Female	Male	Female	Male	Female
All races.....	423,330	245,135	178,195	214,848	156,072	30,490	22,123

Negro.....	255	172	83	105	83	7	-----
Puerto Rican.....	8,206	4,407	3,889	4,407	3,889	-----	-----
All others.....	579	313	266	284	264	20	12

Nativity.—In the classification by nativity, a person born in continental United States or in any of its territories or possessions is counted as native. Likewise included as native are the small number of persons who, although born in a foreign country or at sea, are American citizens by birth because their parents were American citizens.

Place of birth.—The native population is classified, with respect to place of birth, into five groups: Those born in the Territory of Hawaii, those born in the Philippine Islands, those born in Puerto Rico, those born in other United States territories or possessions (including American citizens born abroad or at sea), and those born in continental United States.

The foreign-born population is classified according to country of birth. All classifications of the 1940 population according to country of birth are based on the political boundaries of January 1, 1937, which were practically the same as in 1930.

Age.—The age classification is based on the age of the person at his last birthday before the date of the census, that is, the age of the person in completed years.

Age data for the Territory, Honolulu city, and counties are presented by 5-year periods up to 54 years and by 10-year periods to 74 years. For cities of 5,000 to 100,000 figures are presented by 5-year periods up to 34 years and 10-year periods from 35 to 74 years. Data are also available in various tables for additional age groups having some special significance, i. e., 21 years and over and the various groups shown in connection with school attendance and employment status.

Citizenship.—The classification of the foreign born by citizenship comprises two main groups, naturalized and alien; the second group is further subdivided into those having first papers (that is, those who have made formal declaration of intention to become citizens of the United States) and those having no papers. In addition, there is a third group made up of foreign-born persons for whom no report on citizenship was obtained. Since it is likely that most of these persons are aliens, they are often included with the aliens in summary figures for citizens and noncitizens.

Marital status.—In the classification by marital status four major groups are shown: Single, married, widowed, and divorced. In all censuses there were a few persons for whom the enumerators failed to report marital status. All these persons are here classified as single.

HAWAII

School attendance.—The school attendance tabulation for 1940 is based on the replies to the enumerator's inquiry as to whether the person had attended, or been enrolled in, any regular school or college between March 1 and April 1, 1940. Night schools or vocational schools were not included unless they were a part of the regular school system; and no correspondence schools were included. The school attendance question in the Census of 1930 applied to a somewhat longer period, namely, the seven months between September 1, 1929, and April 1, 1930. Furthermore, in the earlier censuses the question was not restricted as to type of school.

Highest grade of school completed.—In 1940 the census, for the first time, included a question on the formal educational attainment of each person. The question on the schedule asked for the last full grade that the person had completed in the regular school system—public, private, or parochial school, college, or university. This question replaced the inquiry on illiteracy included in previous censuses and provides data on educational status, a characteristic which is significant for every population group, especially in combination with other characteristics.

The tabulations on last year of school completed which are presented in this bulletin, are restricted to persons 25 years old and over, practically all of whom have completed their formal education. All tables presenting data on education include the median year of school completed. The median year of school completed may be defined as that year which divides the population group into equal parts, one-half having completed more schooling, and one-half having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, the completion of the first year of high school is indicated by 9 and of the last year of college by 16.

Employment status.—In the classification by employment status in the 1940 Census of Population, all persons 14 years old and over are classified on the basis of their activity during the week of March 24 to 30, 1940, into two principal groups: (1) Persons in the labor force, including those employed for pay or profit or at unpaid family work, those on public emergency work, and those seeking work; and (2) persons not in the labor force. The latter group includes persons reported as engaged in their own home housework; those in school; those unable to work; all inmates of penal and mental institutions and homes for the aged, infirm, and needy, regardless of their activity during the census week; others not employed, not on public emergency work, and not seeking work; and persons for whom employment status was not reported.

The various categories of persons in the labor force are defined below:

Employed (except on public emergency work).—The group classified as employed includes: (a) Persons who worked for pay or profit at any time during the week of March 24 to 30, 1940, in private work or nonemergency Federal, Territorial, or local government work, or assisted without pay on a family farm or in a family business; and (b) persons not actually at work and not seeking work during the week of March 24 to 30, 1940, but with jobs, businesses, or professional enterprises from which they were temporarily absent because of vacation, illness, industrial dispute, bad weather, or lay-off not exceeding 4 weeks with definite instructions to return to work on a specific date. The group "Employed (except on public emergency work)" includes not only employees but also proprietors, farmers, other self-employed persons, and unpaid family workers.

On public emergency work.—This category includes persons who, during the week of March 24 to 30, 1940, were at work on, or assigned to, public emergency work projects conducted by the Work Projects Administration (WPA), the National Youth Administration (NYA), or the Civilian Conservation Corps (CCC).

In the interpretation of the data for persons on public emergency work, allowance must be made for the misclassification of considerable numbers of public emergency workers. The

number of persons reported in the census as on public emergency work in Hawaii was 2,326, whereas the number recorded on the pay rolls of the Federal emergency work agencies at the time of the census was 3,568.

Seeking work.—This category represents persons without work of any sort in the week of March 24 to 30, 1940, who were actively seeking work during that week. The group seeking work was subdivided into experienced workers and new workers, the latter being persons who had not previously worked full time for 1 month or more. Persons seeking work for whom a report on work experience was lacking were classified as experienced workers.

Persons with a job but not at work were classified as employed because the strict definition of this group and the fact that these persons were reported as not seeking work, tended to eliminate all except those who would shortly return to the employment from which they were temporarily absent.

Number of unemployed.—The total number of unemployed, as usually defined, includes (1) persons seeking work and without any form of public or private employment and (2) those on public emergency work programs established to provide jobs for the unemployed. Because of the misclassification of public emergency workers, the census total of these two groups understates the amount of unemployment. More satisfactory figures can be obtained by adding to the census figures for persons seeking work, the number of persons on pay rolls of the Federal emergency work agencies at the time of the census. This procedure yields a total of 8,678 unemployed persons.

Comparison of 1940 data for the labor force with previous data for gainful workers.—The 1940 data for the labor force are not directly comparable with the census statistics for gainful workers in 1930 and earlier years because of differences in definition. "Gainful workers" were persons reported as having a gainful occupation, that is, an occupation in which they earned money or a money equivalent, or in which they assisted in the production of marketable goods, regardless of whether they were working or seeking work at the time of the census. The labor force is defined in the 1940 census on the basis of activity during the week of March 24 to 30, and includes only persons who were employed, seeking work, or on public emergency work in that week. Thus seasonal workers who were neither working nor seeking work during the census week were excluded from the labor force in 1940; such persons were classified for the most part as gainful workers in 1930. In addition certain classes of persons, such as retired workers, some inmates of institutions, and recently incapacitated workers were frequently included among gainful workers in 1930, but in general, such persons are not in the 1940 labor force. On the other hand, the 1940 labor force includes persons seeking work without previous work experience, that is, new workers, and persons reported as in the labor force for whom neither occupation nor industry was entered on the schedule. Most of the relatively few new workers at the time of the 1930 and earlier censuses were probably not counted as gainful workers. Likewise, some persons who were actually gainful workers, but for whom neither occupation nor industry was reported, were not included in the gainful worker figures for 1930 and earlier years.

The 1940 labor force figures are restricted to persons 14 years old and over, whereas the number of gainful workers shown in earlier censuses included persons 10 years old and over. The number of workers 10 to 13 years old has become relatively small and no longer justifies the additional burden of enumeration and tabulation necessary to retain the 10-year age limit. In making comparisons between the 1940 labor force data and the gainful worker statistics in earlier census reports, the slight difference in age limits should be taken into consideration. The gainful worker statistics shown in this bulletin for earlier censuses exclude those 10 to 13 years old.

Class of worker.—Class-of-worker statistics for employed workers (excluding persons on public emergency work) are given

in table 12, which shows the numbers of wage or salary workers, employers and own-account workers, unpaid family workers, and workers who failed to report class of worker. The composition of the various categories is described below:

Wage or salary workers.—This class consists of persons who worked as employees for wages or salary (in cash or kind). It includes not only factory operatives, laborers, clerks, etc., who worked for wages, but also persons working for tips or for room and board, salesmen and other employees working for commissions, and salaried business managers, corporation executives, and government officials.

Employers and own-account workers.—This group consists of persons who operated their own business enterprises. It includes not only the owner-operators of large stores and manufacturing establishments, but also small merchants, independent craftsmen, farmers, professional men, peddlers, and other persons conducting enterprises of their own. It does not include managers paid to operate businesses owned by other persons or by corporations; such workers are classified as wage or salary workers.

Unpaid family workers.—This class is composed of persons who assisted without pay on farms or in stores or other enterprises operated by other members of their families. The great majority of unpaid family workers are farm laborers.

Occupation and industry statistics.—In the 1940 Population Census of Hawaii, inquiries relating to occupation and industry were made for all experienced persons 14 years old and over in the labor force during the census week (March 24 to 30, 1940). The occupation and industry data presented in this bulletin, however, are limited to employed persons (except those on public emergency work), and relate to their jobs during the census week.

Occupation classification.—The detailed occupation classification used in the 1940 Population Census for Hawaii contains 378 titles.¹ In this bulletin, the detailed occupation classification is used only for the presentation of occupation statistics for employed workers (except those on public emergency work), by sex, for the Territory and for Honolulu city (table 13). In other tables, occupation data are shown in terms of 12 major occupation groups, representing major groupings of the detailed classification.

Industry classification.—The industry classification used in the 1940 Census for Hawaii contains 131 titles.² The detailed industry classification is used here only for the presentation of industry statistics for employed workers (except those on public emergency work), by sex, for the Territory and for Honolulu city (table 15). In other tables, a condensed list of 44 industries is used. This abbreviated list represents selections and combinations of the titles in the complete classification.

Coverage of industry classifications "Government" and "Domestic service."—The industry classification "Government (not elsewhere classified)" does not include all persons employed by governmental agencies. Persons are included in this classification only if they were engaged in activities that are peculiarly governmental functions. Government employees who were engaged in activities that are commonly performed by employees of private enterprises are included in the industry classification in which their activities fell. For example, a tax collector is included in the industry classification "Government," but a carpenter employed on a Federal building project is classified in the category "Construction." The total number of persons employed by governmental agencies, therefore, cannot be obtained from the industry classification.

¹ With some exceptions, this classification is convertible to the 327-item Convertibility List of Occupations, which was prepared by the Joint Committee on Occupational Classification (sponsored by the Central Statistical Board and the American Statistical Association) to increase comparability among occupational statistics compiled by various governmental and private sources.

² This classification is a condensation of the Standard Industrial Classification of 1,411 titles, which was prepared for use in classifying industry returns from workers or members of their families, by the Joint Committee on Occupational Classification, in cooperation with the Committee on Industrial Classification sponsored by the Central Statistical Board.

The industry group "Domestic service" is somewhat more inclusive than the major occupation group "Domestic service workers," which is limited to "Housekeepers, private family," "Laundresses, private family," and "Servants, private family." The industry classification "Domestic service" includes not only these workers but also persons in occupations such as practical nurse, chauffeur, and gardener, if they were employed by private families.

Comparison of occupation and industry statistics for 1940 with data from earlier censuses.—No comparisons of the 1940 census data on occupation and industry with similar data from previous censuses are included in this bulletin. Such comparisons are complicated by three important considerations.

First, gainful workers, the group for which occupation and industry statistics were presented in previous censuses, are not strictly comparable with the 1940 labor force.

Second, the occupation and industry data shown here do not cover the entire labor force, being limited to employed persons.

Third, the 1940 classifications of occupation and industry differ from those used in earlier censuses, with respect to arrangement and content of titles. For example, in 1930, most of the occupation titles were grouped under a few major industrial headings ("Agriculture," "Forestry and fishing," "Extraction of minerals," etc.), based upon the industry in which the occupation was most commonly followed. In 1940, however, the occupation titles are grouped into 12 major occupation groups ("Professional and semiprofessional workers," "Craftsmen, foremen, and kindred workers," "Operatives and kindred workers," etc.), regardless of industrial attachment.

Wage or salary income and receipt of other income.—In the 1940 census, all persons 14 years old and over (except inmates of specified institutions) were asked to report the amount of money wage or salary income received in 1939. (Those who received over \$5,000 were required only to report that they had received more than that amount.) Persons 14 years old and over were also asked to report whether they had received \$50 or more from sources other than money wages or salaries in 1939. This comparatively small amount was chosen in order to identify those persons whose incomes, for all practical purposes, were limited to receipts from wages or salaries. A question regarding the exact amount of nonwage income was not included because of the very considerable additional burden of enumeration that such a question would have entailed.

Wage or salary income, as defined for the purposes of the 1940 census, includes all money received by persons as compensation for work or services performed as employees, including commissions, tips, piece-rate payments, bonuses, etc., as well as receipts commonly referred to as wages or salaries. Enumerators were instructed not to consider as wage or salary income receipts from business profits, fees, travel reimbursements, sale of crops, unemployment compensation, etc., nor compensation in forms other than money, such as meals, lodging, clothing, fuel, etc.

"Other income" includes all income other than money wages or salaries, such as income from roomers or boarders, business profits, professional fees, income in kind, receipts from the sale of farm products, rents, interest, dividends, unemployment compensation, direct relief, old-age assistance, pensions, annuities, royalties, and regular contributions from persons other than members of the immediate family. Other income does not include receipts in the form of lump-sum insurance settlements, occasional gifts of goods or money, inheritances, receipts or profits from the sale of properties (unless the person earned his living by buying and selling such properties) or reimbursements for travel expenses.

In this bulletin, the group of persons for whom the receipt or nonreceipt of other income was not reported is combined with the

HAWAII

group without other income of \$50 or more, since the majority of the persons failing to report probably had no other income.

Data on wage or salary income and other income in 1939 are presented in table 16 for the experienced labor force, which comprises employed persons, those on public emergency work, and persons other than new workers seeking work, during the week of March 24 to 30, 1940. In this table statistics are presented separately for wage or salary workers and for other experienced workers (that is, for the combination of employers, own-account workers, unpaid family workers, and persons for whom class of worker was not reported). The group of wage or salary workers is subdivided into (a) private and nonemergency government workers, and (b) public emergency workers. The category "public emergency workers" includes both persons who were on public emergency work during the census week and persons seeking work during that week who had last worked on public emergency projects. This category is therefore somewhat larger than the employment status group "on public emergency work."

The statistics on wage or salary income and receipt of other income refer to the calendar year 1939, while the classifications by employment status and class of worker refer to the week of March 24 to 30, 1940. Because of the rapid turn-over of emergency project employment, the difference in time reference is probably most important in connection with the wage or salary income distribution of public emergency workers. A considerable proportion of the wage or salary income reported by public emergency workers was derived from private employment. Likewise, some persons who were employers, own-account workers, and unpaid family workers at the time of the census had been employed as wage or salary workers during a part or all of the year 1939, and reported themselves as having received various amounts of wage or salary income.

Two important factors may have made for inaccurate reporting of wage or salary income. First, persons who received their compensation in many installments of irregular amounts may not have been able to determine accurately the total amount received. Second, some informants who replied to the census inquiries for the whole family undoubtedly did not know the precise amount of wage or salary income received by each mem-

ber. Nevertheless, the statistics present a reasonably accurate picture of the amount and distribution of wage or salary income received in 1939.

Months worked in 1939.—In order to show the relationship between income and amount of employment during the year, statistics on wage or salary income and receipt of other income are presented for wage or salary workers classified according to number of months worked in 1939. The classification by number of months worked was obtained from a question regarding the number of weeks worked for pay or profit, including public emergency work, or at unpaid family work, which was asked for all persons 14 years old and over except inmates of certain institutions. For persons with periods of part-time work, the report was to be made in terms of equivalent full-time weeks, a full-time week being defined as the number of hours locally regarded as full time for the given occupation and industry. Paid vacations or other absences with pay were included in the number of weeks worked.

The returns for weeks worked in 1939 have been converted into months in the tables in this bulletin, because a large proportion of the reports were only approximate, and did not represent valid statements of the precise number of weeks of work. The groupings of months worked that are used in this bulletin are listed below, with their equivalents in terms of the original reports of weeks worked.

Number of months worked	Number of weeks worked
Less than 6 months, or not reported.	0 to 28 weeks, or not reported.
6 to 8 months-----	24 to 35 weeks.
9 to 11 months-----	36 to 49 weeks.
12 months-----	50 to 52 weeks.

Data on months worked in 1939 were not tabulated for employers, own-account workers, and unpaid family workers. For such workers, the data on months worked are less significant and less reliable than for wage or salary workers. Moreover, for workers in these groups, the amount of employment in 1939 has little relation to the amount of wage or salary income received.

HOUSING: GENERAL CHARACTERISTICS

INTRODUCTION

This bulletin presents for the Territory of Hawaii the results of the Census of Housing taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Dwelling units are classified as occupied and vacant, by tenure, by race of occupants, by value or monthly rent, by type of structure, by exterior material, by state of repair, by number of rooms, by size of household, and with respect to such facilities as water supply, bath and toilet facilities, electric lights, refrigeration, and radio.

Related reports.—In the First Series Population bulletin for Hawaii, entitled "Number of Inhabitants," the total population of the Territory on April 1, 1940, was given for all of its political subdivisions, including counties, islands, districts, cities, towns, and villages, with comparative figures for earlier censuses. The Second Series Population bulletin presents data on the characteristics of the population, including sex, age, color, place of birth, citizenship, marital status, school attendance, employment status, major occupation group and industry, and wage or salary income.

Data from previous censuses.—The number of occupied dwelling units in 1940 is approximately comparable with the number of families which is shown in the reports on population for earlier censuses. The average population per occupied dwelling unit in 1940 may likewise be compared with the population per family, as shown for prior censuses. The term "dwelling" as used in 1930 (and earlier) is comparable with the term "residential structure" as used in 1940. The classification of homes by tenure has been shown for each census since 1920.

Arrangement of tables.—The tables in this bulletin are arranged in three groups: Tables 1 to 13 present general characteristics for counties and cities; tables 14 to 16 constitute a general summary of the statistics for the Territory by Census Tracts; and tables 17 to 24 contain detailed statistics for Honolulu city by Census Tracts.

Areas.—Statistics are presented in this bulletin for counties, islands, districts, cities, towns, villages, and census tracts. Honolulu, Hilo, and Wailuku were designated as cities for purposes of classification. These places have no legally established boundaries, however, and it was necessary, except in the case of Honolulu city, for the enumerators to determine what dwelling units were locally considered to be in the urban place. The area designated Honolulu city comprises all of Honolulu District except Palmyra Island.

Census tracts.—The census tracts, for which statistics were collected for the first time in 1940, are small areas into which the Territory has been subdivided for statistical purposes, through cooperation with local committees made up of representatives of governmental and nongovernmental agencies. While this subdivision into tracts has been more or less arbitrary, several principles have been followed in general in laying out the tracts for the Territory. The tract areas are established with a view to approximate uniformity in population, with some consideration for uniformity in size, and with due regard for natural barriers. Each tract is designed to include an area fairly homogeneous in population characteristics. In all cases the tracts have been laid out in such a way as to form subdivisions of districts. The tracts are intended to remain unchanged from census to census, and thus to make possible studies of changes in social and economic characteristics of the population within

small sections of the Territory. The 97 tracts are grouped in tables 14 to 16 according to the counties, districts, and cities in which they are located and data for the 29 tracts in Honolulu city are shown in tables 17 to 24. The various tracts are shown on the map entitled "Hawaii by Counties, Islands and Census Tracts."

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit, as the term is used in the census, is the living quarters occupied by or intended for occupancy by one family or household. A dwelling unit may be a detached house, an apartment in a larger building, such as an apartment house, or a room in a structure primarily devoted to business or other nonresidential purposes. Included as dwelling units are also a few other places which were not constructed for residential purposes but are nevertheless being used as living quarters by persons having no other place of residence.

All occupied dwelling units and all vacant dwelling units in habitable structures were included in the Housing Census except the following types of dwelling places: Hotels for transient guests; dormitories for students; educational or religious institutions, military institutions, penal institutions; hospitals for the insane; homes for orphans and for the aged, etc.; Civilian Conservation Corps camps; and construction camps. These special types of dwelling places were not considered as part of the general housing market.

Tenure.—Dwelling units are classified as occupied if they were occupied at the time of the census by households enumerated in the population census at their usual place of residence. A dwelling unit is classified as owner occupied if it was owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant occupied, even though no cash rent was actually paid for the living quarters. Rent-free quarters and living accommodations which were received in payment for services performed are thus included with the tenant-occupied units.

The dwelling units classified as vacant represent for the most part units in which no person was living at the time of the census and which were on the market for sale or rent. They also include, however, small numbers of units held for absent families and a few units occupied by nonresident families—that is, by families whose usual place of residence was different from the place in which they were enumerated.

Race of occupants.—Occupied dwelling units are classified by race of occupants in accordance with the definition used in the 1940 Census of Population, the classification being based on the race reported for the head of the household. In the tabulations of the housing characteristics, seven groups are distinguished as follows: Hawaiian, part Hawaiian, Caucasian, Chinese, Filipino, Japanese, and "Other" (including Korean, Negro, and other races).

Residential structure.—A residential structure is a building which contains one or more dwelling units.

Type of structure.—Statistics are presented for dwelling units classified according to the type of structure in which they are located. A one-family structure is a structure containing only one dwelling unit, being in most cases a structure having some open space on all four sides. Each dwelling unit in a group of three or more houses built together in a solid row is counted as

a one-family structure, though two attached dwelling units by themselves constitute one two-family structure.

Number of rooms.—All rooms that are used or available for use as living quarters for the household are counted in determining the number of rooms in each dwelling unit. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the attic are not counted as rooms. Rooms used for office purposes by a person, such as a dentist, lawyer, or contractor, who lives in the dwelling unit are included, but rooms used as a store or shop are not included.

Size of household.—All persons enumerated in the population census as members of the household (including lodgers, servants, and other unrelated persons having no other usual place of residence) are counted in determining the number of persons who occupy each dwelling unit. Students away from home at school or college and other members temporarily absent are included as members of a household.

Persons per room.—The number of persons per room was obtained by dividing the number of persons in the household by the number of rooms in the dwelling unit. This figure was computed for each occupied dwelling unit.

Exterior material.—Dwelling units are classified according to the principal material used for the exterior walls of the structure. Combination finishes are classified according to the material that covers the greater part of the exterior wall area. "Other" includes such materials as stone, cinder block, tile, metal, adobe, and composition shingles.

State of repair.—Instructions to enumerators specified that a structure was to be reported as needing major repairs when a part or parts of the structure, such as floors, roof, walls, or foundations, required repairs or replacement, the continued neglect of which would impair the soundness of the structure and create a hazard as to its safety as a place of residence.

Water supply.—The statistics for water supply relate to the principal source of water supply available for household purposes (not necessarily drinking purposes). "Other" includes wells, springs, rivers and smaller streams, and all other sources of water supply other than running water.

Bathtub or shower.—A dwelling unit is counted as having bathtub or shower if it contains either type of equipment supplied with running water (not necessarily hot water).

Toilet facilities.—Dwelling units are classified as having a flush toilet (with running water), other toilet or privy, or not having any of these.

Electric light.—Dwelling units are classified as with or without electric lights. Units where the service was temporarily suspended are included with those having electric light.

Radio.—A dwelling unit is counted as having a radio if it contained a usable radio set or one only temporarily out of repair.

Refrigerator.—Occupied units are classified as having a refrigerator (mechanical or ice) or not having a refrigerator.

Value and monthly rent.—The enumerator was instructed to obtain for each owner-occupied dwelling unit its estimated current market value; and for each tenant-occupied dwelling unit, the monthly rent paid, or if no cash rent was paid, the estimated monthly rental value based on rents paid for similar dwelling units in the neighborhood; and for each vacant dwelling unit, the rent asked or the estimated rental value. If the owner-occupied unit was in a structure which contained more than one dwelling unit, or if a part of the structure was used for business purposes, the value to be reported was the value of that part only which was occupied by the owner and his household.

Rental value.—In tables where a single figure is given representing the rental value of owner-occupied, tenant-occupied, and vacant dwelling units combined, the monthly rental value of owner-occupied units is assumed to be 1 percent of the reported total value.

Medians.—The median value of the dwelling units in a given area is the value of the dwelling unit which would stand in the middle of the series if the units reporting value were arranged in order according to value; in other words, it is the value which divides the series into two equal parts, one having values higher than the median and the other having values lower than the median. The median monthly rental may be defined in a similar manner.

In computing the median size of household, it is necessary to assume a continuous distribution within each size group. For example, when the median is in the 3-person group, the lower and upper limits of the group are assumed to be $2\frac{1}{2}$ and $3\frac{1}{2}$ respectively. A similar method was used in computing the median number of rooms.

Decorators and window dressers	43	14	38	12	Apparel and other fabricated textiles	9	97	9	83	
Electrotypers and stereotypers	3		2		Lumber, furniture, and lumber products	50	15	49	14	
Engravers, except photoengravers	8		8		Paper and allied products	20	3	4	1	
Heat treaters, annealers, and temperers	1		1		Printing, publishing, and allied industries	40	43	38	40	
Jewelers, watchmakers, goldsmiths, and silversmiths	70	1	50		Miscellaneous chemical industries	20	11	9	5	
Locomotive firemen	102		4		Stone, clay, and glass products	22	1	10	1	
Molders, metal	38		25		Iron and steel and not specified metal industries	75	23	59	20	
Opticians and lens grinders and polishers	18		12		Other manufacturing industries	81	28	63	26	
Pattern and model makers, except paper	77		73		Transportation, communication, and other public utilities	273	20	222	10	
Photograph engravers and lithographers	32	1	31	1	Railroads (incl. railroad repair shops)	25		0		
Piano and organ tuners	12		10		Warehousing and storage	31	7	31	7	
Plasterers	86		82		Water transportation	32	2	31	2	
Pressmen and plate printers, printing	48	2	37	1	Miscellaneous transportation	68	10	57	10	
Roofers and slaters	30		29		Communication	12	1	9		
Sawyers	0		3		Electric light and power	60		49		
Shoemakers and repairers (not in factory)	66	3	40	3	Gas works and steam plants	23		20		
Structural and ornamental metal workers	50		46		Water and sanitary services	22		16		
Tinsmiths, coppersmiths, and sheet metal workers	100		85		Wholesale and retail trade	251	221	212	176	
Upholsterers	27	6	26	0	Wholesale trade	47	31	48	29	
Operatives and kindred workers?	14,422	4,650	7,033	3,010	Food and dairy products stores, and milk retailing	53	24	34	12	
Apprentices	825	102	204	40	Apparel and accessories stores, except shoes	32	110	25	90	
Carpenters' apprentices	51		27		Miscellaneous retail trade	119	47	107	36	
Electricians' apprentices	24		18		Business and repair services	180	11	116	0	
Machinists' apprentices	41		17		Automobile storage, rental, and repair services	124	1	77	1	
Plumbers' apprentices	17		12		Business and miscellaneous repair services	65	10	39	5	
Building and hand trade apprentices (n. o. c.)	30	1	22	1	Government	319	12	259	10	
Apprentices, printing trades	20	3	16	3	Postal service	1	1	1		
Apprentices, specified trades (n. e. c.)	124	98	86	45	National defense	120	3	114	2	
Apprentices, trades not specified	9		7		Federal Government (n. e. c.)	149	7	124	7	
Attendants, filling station, parking lot, garage, and airport	523	25	303	0	Territorial and local government (n. e. c.)	43	1	20	1	
Brakemen and switchmen, railroad	273	1	25	1	Miscellaneous industries and services	240	206	133	187	
Brakemen, railroad	200		21		Agriculture (exc. sugar) and fishery	60	16	15	10	
Switchmen, railroad	13	1	4		Insurance	2		2		
Chauffeurs and drivers, bus, taxi, truck, and tractor?	4,203	20	1,750	4	Laundering, cleaning, and dyeing services	106	187	59	148	
Deliverymen?	1,236	8	711	4	Hotels and miscellaneous personal services	23	33	16	8	
Firemen, except locomotive and fire department	457	3	156	1	Amusement, recreation, and related services	18	11	13	7	
Laundry operatives and laundresses, except private family	828	753	181	415	Professional and related services	22	16	14	11	
Linemen and servicemen, telegraph, telephone, and power	307	1	209		Industry not reported	10	4	14	3	
Meat cutters, except slaughter and packing house	190	3	130	1	Domestic service workers	2,002	6,518	1,000	3,445	
Oilers, machinery	287	0	65	2	Housekeepers, private family	30	1,186	12	494	
Sailors and deck hands, except U. S. Navy	216	1	131	1	Laundresses, private family	32	976	17	265	
Welders and flame-cutters	866		187		Servants, private family	1,040	4,350	1,061	2,086	
Other specified operatives and kindred workers	750	997	405	575	Protective service workers	27,860	14	5,441	10	
Asbestos and insulation workers	9		7		Firemen, fire department	183		124		
Blasters and powdermen	18				Guards and watchmen	916	8	511	6	
Boatmen, canalmen, and lock keepers	55	1	23	1	Watchmen, crossing and bridge tenders	803	8	507	6	
Buffers and polishers, metal	4		3		Policemen, sheriffs, and marshals	537	6	223	4	
Chainmen, rodmen, and axmen, surveying	102		35		Policemen and detectives, government	405	5	190	3	
Conductors, bus and street railway	12		11		Policemen and detectives, except government	104	1	24	1	
Dressmakers and seamstresses (not in factory)	20	552	14	530	Marshal and constables	3		3		
Filers, metal	2		1		Sheriffs and bailiffs	25		0		
Fruit and vegetable graders and packers, except in cannery	2	5	2	5	Soldiers, sailors, marines, and coast guards?	20,233		4,583		
Furnace men, smeltermen, and pourers	5		3		Service workers, except domestic and protective	4,815	3,762	3,117	2,246	
Grinders, metal	1		1		Attendants, hospital and other institution	321	218	162	46	
Heaters, metal	1		1		Barbers, beauticians, and manicurists	352	606	172	381	
Milliners (not in factory)	2	21	1	18	Charwomen, janitors, and porters	1,354	213	758	126	
Mine operatives and laborers?	184		69		Janitors and sextons	18	10	4	8	
Motion picture projectionists	96	2	47	1	Porters	1,333	104	740	113	
Motormen, street, subway, and elevated railway	35		30			8	9	5	5	
Motormen (vehicle), mine, factory, logging camp, etc.	2		1							
Painters, except construction and maintenance	95	1	69							

² Mine laborers are included in "Mine operatives and laborers" in this group.
³ Drivers for bakeries, laundries, dry cleaners, stores, etc., are included in "Deliverymen."

⁴ Excludes commissioned officers, professional and clerical workers, and craftsmen, who are classified with other workers in their respective occupation.

CHARACTERISTICS OF THE POPULATION

Legal basis for the 1940 census	2
Method of canvass and tabulation	2
Presentation of statistics	2
Comparability of data	2
Definitions and explanations	2
A farm	2
Farm operator	2
Farms reporting	2
Land area	2
Land in farms	2
Farms and farm acreage classified by size of farm	2
Incorporated farms	2
Farm values	2
Farm mortgage debt	2
Work off farm	2
Age of operator	2
Year of occupancy	2
Farm labor	2
Farm expenditures	2
Farm machinery and facilities	2
Livestock and livestock products	2
Age, sex, and other groups enumerated for various classes of livestock, 1940, with approximately comparable groups, 1900 to 1930	2
Goats and kids	2
Hogs and pigs	2
Poultry	2
TERRITORIAL TABLES:	
1.—Farms and farm acreage, by race and by tenure of operator, and by size of farm: 1900 to 1940	8
2.—Value of farms, by race and by tenure of operator, and value of buildings and implements and machinery, by tenure: 1900 to 1940	9
3.—Mortgaged farms operated by full owners and part owners, classified by race of farm operator and interest rate, 1940	9
4.—Work off farm for pay or income, by race and by tenure of operator, 1939	11
5.—Age of farm operators by race and by tenure of operator, 1940	11
6.—Year of occupancy, by race and by tenure of farm operator, 1940	11
7.—Specified farm machinery and facilities, 1940; farm labor for a specified week of 1939 and 1940; farm expenditures, 1939; and by race and by tenure of farm operator	12
8.—Specified classes of livestock on farms, 1900 to 1940; and livestock products, 1899 to 1939	13
9.—Specified crops—Farms reporting, acreage, and production: 1899 to 1939	13
10.—Farms reporting and value of farm products sold, traded, or used by farm households, classified by major source of income, 1939	14
11.—Farms reporting and value of farm products sold, traded, or used by farm households, classified by size of total value of farm products, 1939	14
COUNTY TABLES:	
I.—Farms, farm acreage, and value, 1940, 1930, and 1920; farm land according to use, 1939 and 1929; and value of buildings and implements and machinery, 1940 and 1930	18
II.—Farms, 1940 and 1930; farm acreage, and value of land and buildings, 1940 and 1930; value of buildings and implements and machinery, 1940; and cropland harvested, 1939; by tenure and race of operator	19
III.—Number of farms, 1940 and 1930; farm acreage and specified values, 1940; and cropland harvested, 1939; by size of farm	25
IV.—Farm mortgage debt of full owners and part owners, Apr. 1, 1940	25
V.—Work off farm, 1939; and age and year of occupancy, Apr. 1, 1940	26
VI.—Farm labor for a specified week of 1939 and of 1940; farm expenditures, 1939; and farm machinery and facilities, Apr. 1, 1940	26
VII.—Farms, farm acreage, value of land and buildings and number of dwellings, automobiles, motortrucks, and tractors, 1940; and cropland harvested and irrigated land, 1939; for incorporated farms	27
VIII.—Specified classes of livestock on farms and ranches, Apr. 1, 1940 and 1930; and specified livestock products, 1939 and 1929	27
IX.—Specified poultry on hand, Apr. 1, 1940 and 1930; chicken eggs produced and specified poultry raised, 1939 and 1929; chickens sold, 1939; bees on hand, Apr. 1, 1940, and honey produced, 1939; and farm slaughter, and purchases and sales of livestock, 1939	28
X.—Acreage and quantity of crops harvested in 1939 and 1929	30
XI.—Vegetables harvested for sale, 1939 and 1929; and horticultural specialties, 1939	30
XII.—Land in tree fruits, pineapples, coffee, nuts, and grapes, 1940; citrus, other fruit, and nut trees and grapevines, 1940 and 1930, with production, 1939	31
XIII.—Value of farm products sold, traded, or used by farm households with percentage of farms reporting and percent distribution of value of products, by source of income, 1939	32
XIV.—Farms reporting and value of farm products sold, traded, or used by farm households, classified by major source of income, 1939	34
XV.—Farms reporting and value of farm products sold, traded, or used by farm households, classified by total value of products, 1939	35

HAWAII

CENSUS OF AGRICULTURE—HAWAII

INTRODUCTION

The compilation of these statistics and the preparation of this report were made under the supervision of Zellmer R. Pettet, Chief Statistician for Agriculture, assisted by Fay Hurley, Principal Statistician in Charge of Analysis.

History of Census of Agriculture.—The first Census of Agriculture in Hawaii was taken by the United States in 1900 in connection with the Twelfth Decennial Census of Population. Since that time, a census of agriculture has always been taken in conjunction with the census of population in each decennial enumeration.

Legal basis for the 1940 Census.—Provision for the 1940 Census was made in the Act providing for the Fifteenth Decennial Census which was approved on June 18, 1929. In part this Act provided, "That a census of population, agriculture, irrigation, drainage, distribution, unemployment, and mines shall be taken by the Director of the Census in the year 1930 and every ten years thereafter. The census herein provided for shall include each State, the District of Columbia, Alaska, Hawaii, and Puerto Rico".

Method of canvass and tabulation.—In the 1940 Census of Agriculture, as for each agricultural census taken by the United States in Hawaii, a separate schedule was required for every farm, ranch, and plantation. The data, therefore, are the results obtained from a tabulation of the information given by farm operators to census enumerators in a personal canvass of the individual farms, ranches, and plantations.

After the schedules were received in Washington and examined for accuracy and completeness, the figures were transferred to punch cards. By means of mechanical equipment the totals for geographic and political areas were obtained.

Presentation of statistics.—This bulletin contains the available results of the 1940 enumeration of agriculture. The statistics herein, in the main, relate to the number, acreage, and value of farms; the value of buildings and of implements and machinery on farms; farm land classified according to its utilization; age of farm operator; work off the farm for pay or income; years on farm; mortgage debt on owner-operated farms; farm labor; selected farm expenditures; age and inventory of automobiles, motortrucks, and tractors on farms; farms reporting and numbers of specified classes of livestock and poultry with some of their products; farms reporting with the acreage and production of specified crops harvested; acreage and value of vegetables harvested for sale; number of trees and production of fruits and nuts; the value of farm products sold, traded, or used by farm households; and farms classified by major source of income.

In this bulletin, summary tables containing totals for the Territory only are presented and these are followed by tables in which county figures, as well as totals for the Territory are shewn. For those items appearing in the Territorial tables, all available comparative data are presented for each census beginning with 1900. In the county tables, in addition to the data for 1940, comparative figures are presented for most of the items from the Census of 1930. The information obtained from inquiries in former census years which were not a part of the agriculture schedule for 1940 is usually omitted from both Territorial and county tables.

In using the statistics in this bulletin attention is called to the fact that information for some of the items appears only in the county tables and is not shown in the Territorial tables. Likewise, data for some items are given only in the Territorial tables without corresponding figures being shown by counties.

Comparability of data.—The Agriculture Census of 1940, in accordance with the law providing for the census, was taken as of April 1, 1940; consequently all inventory items relate

to that date. Crop and livestock productions, unless specifically stated otherwise, are for the calendar year 1939. Likewise, for other years the inventory items relate to the date of the census and the production items to the preceding calendar year. Since the date of the census has varied, affecting the comparability of the data for some items more than for others, the date of the enumeration or the year of production is usually indicated in the table and the user of the statistics should consider the difference in enumeration dates when comparing the figures for one year with those for another.

DEFINITIONS AND EXPLANATIONS

A facsimile of the schedule used in 1940 is shown at the end of this bulletin. Only those items which need clarification or for which explanations are deemed necessary as to their comparability are discussed.

A farm.—The schedule form for 1940 was entitled General Schedule for Farms, Ranches, and Plantations. The following definition appeared on the reverse side of the schedule:

DEFINITION OF "FARM."—A farm, for Census purposes, consists of one or more tracts of land (not necessarily adjoining) on which some agricultural operations are performed or supervised by one person, either alone or with the assistance of members of his household or of hired employees. The land operated by a partnership is likewise treated as a farm. If a farm consists of two or more tracts of land, these may be held under different tenures, as when one tract is owned by the farmer and another tract is rented by him. When a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is treated as a farm. Thus on a plantation the land operated by each cropper, renter, or tenant should be reported as a separate farm, and the land operated by the owner or the manager by means of wage hands should likewise be reported as a separate farm. Do not report as a farm any tract of land of less than 3 acres, unless its agricultural products in 1939 were valued at \$150 or more.

In the enumerators' handbook the following instruction was given:

The definition of "farm" appearing on the back of the schedule must be carefully studied by the enumerator. Note that for tracts of land of 3 acres or more the \$150 limitation in Hawaii for value of agricultural products does not apply, but that reports are to be made for such tracts only when some agricultural operations have been performed thereon since the beginning of 1939 or are in prospect before the close of 1940. A schedule should be filled out for each town, ranch, plantation, or other enterprise that meets, or that might possibly meet, the minimum requirements of the definition. When in doubt, always fill out a schedule.

Farming or agricultural operations consist of the production of crops or of the care and maintenance of livestock for animal products, animal increase, or value enhancement. "Livestock," as the term is here used, covers poultry of all kinds, rabbits, and bees, in addition to horses, mules, asses, burros, cattle, carabao, sheep, goats, and hogs. Some activities that are covered by the census are not generally recognized as farming. This is especially true where no crops are grown, or where the enterprises are not commonly considered as farms.

A partial list of types of specialized agriculture and of operations not generally recognized as farming but for which Farm, Ranch, and Plantation Schedules were required was provided for census enumerators. This list included such operations as nurseries, greenhouses, bee farms, hatcheries, etc.

Farm operator.—A "farm operator," according to the Census definition, is a person who operates a farm, either performing the labor himself or directly supervising it. For all practical purposes, the number of farm operators is identical with the number of farms.

Race of operator.—Farm operators are classified by race. The races shown for the classification by race are not based strictly on race but, in a large part, on country of origin of the operator and are usually considered racial groups in the organization of statistical material for the Territory of Hawaii.

CENSUS OF AGRICULTURE—HAWAII

3

Separate data are given for the following racial groups:

1. Caucasian.—In this group are included all the farm operators of pure (white) Caucasian blood and includes those whose country of origin was the United States, Germany, Russia, Scotland, Portugal, and other European countries.

2. Chinese 6. Japanese

3. Filipino 7. Puerto Rican

4. Hawaiian 8. Korean

5. Part-Hawaiian 9. Other, including Negro

Tenure of operator.—Farm operators are also classified according to the tenure under which they operate their farms:

Full owners own all the land they operate.

Part owners own a part and rent from others the rest of the land they operate.

Managers operate farms for others and receive wages or salaries for their services. Persons acting merely as caretakers or hired as laborers are not classified as managers.

Tenants operate hired or rented land only.

Farms reporting.—The term "farms reporting," as used in the tables, indicates the number of farms for which the specified items shown in the particular table were reported. If there were 1,922 farms in a county and only 1,465 of these had chickens on hand over 4 months old, April 1, 1940, and the enumeration of that item was complete, the number of farms reporting chickens for that year would be 1,465.

Land area.—The approximate land areas reported for the Territory and for the counties, for 1940 represent redeterminations by the Bureau of the Census and therefore may be at variance with those published in earlier Census Reports even though the county boundaries may not have been changed. The area for 1940 includes only land area while the figures shown for previous censuses relate to gross area. The area for 1940 does not include Midway Island while the area given for previous censuses includes the area of this Island. The measurements involved geodetic values and planimeter readings, and the latest and most authentic maps to be secured from public and private sources were used.

Land in farms.—The acreage designated as "All land in farms" includes considerable areas of land not actually under cultivation and some land not even used for pasture or grazing, but all such land must have been under the control of the operator and considered a part of his farm. Land neither owned nor leased but from which crops were harvested was to be reported as part of the farm.

In 1940, data were secured for 10 classes of land based upon the use made of the land in 1939, as follows:

1. **Cropland harvested.**—The land from which cultivated crops were harvested; lands from which sugarcane was cut and pineapple harvested; and land in orchards, vineyards, nurseries, and greenhouses. Where two or more crops were harvested in 1939 from the same acreage, such acreage was included only once in the acreage for cropland harvested. However, the acreage and the quantity of each individual crop were reported separately as crops harvested. Thus, in some counties the total of the acreage of crops may greatly exceed the acreage designated as cropland harvested.

2. **Cropland for future harvest.**—Land from which no crop was harvested in 1939, but which was occupied by crops such as sugarcane, pineapples, fruit groves, nursery stock, coffee trees, etc., for harvest after 1939. Land from which a crop was harvested in 1939, but later planted to a crop for future harvest was not to be included. For example, land from which sugarcane was harvested during June, July, or August, and planted again immediately, or later, in sugarcane was not reported as land for future harvest but as cropland harvested. Also, land on which the crops, intended for harvest in 1939, failed and on which crops were planted for future harvest was to be excluded under this question and was to be reported under "Crop failure."

3. **Crop failure.**—The land from which no crop was harvested in 1939 because of destruction by storms, drought, floods, insects, disease, or from any cause, or failure to harvest because of low prices or lack of labor or quota restrictions. If a crop was harvested, even though the yield was very low, the land from which the crop was actually harvested was included in the acreage for cropland harvested, not crop failure.

The acreage designated as crop failure does not represent the entire acreage of crops which failed, but only that acreage of land in crops that failed, and which was not successfully replanted to a crop that was harvested in 1939.

4. **Cropland idle or fallow.**—Cropland which was lying idle or which was in cultivated summer fallow; or land on which crops were planted exclusively for soil improvement or the prevention of erosion, and which was not pastured, or from which no crop of any kind was harvested in 1939.

5. **Plowable pasture.**—Land used only for pasture in 1939 which could have been used for crops without additional clearing, draining, or irrigating. Only pasture land that had been plowed within the last 10 years was to be reported as plowable pasture. (Land from which a crop was harvested in 1939 but which was later used for pasture was included under cropland harvested rather than under pasture land.)

6. **Woodland and brushland used for pasture.**—Land in trees and brush used for pasture in 1939. This includes considerable areas in kiawe and algaroba trees used for pasture.

7. **Other land used for pasture.**—This classification includes pasture land other than plowable and woodland pasture.

6. **Woodland not used for pasture.**—This includes woodland and brushland on farms, ranches, and plantations, not used for pasture. Considerable areas of this woodland are used for water conservation.

9. **Wasteland.**—Land covered by lava flows, unusable hillsides, land too arid for pasture, etc.

10. **All other land.**—Includes land occupied by buildings, roads, irrigation ditches and canals, etc.

This is the first census in which the above land classification was used. Consequently, comparable data for the various classes of land for prior censuses do not exist.

In addition to the 10 classes of land separate data are shown for the following classes of land, which represent part of one or more of the above 10 classes of land:

Land in preparation for planting, April 1, 1940.—Land reported in preparation for planting has been further classified as either: (1) Previously under cultivation, or as (2) not previously under cultivation. Land in preparation for planting and previously under cultivation may have been reported on the basis of use in 1939 as cropland harvested, crop failure, future harvest, cropland idle, or plowable pasture. Land in preparation for planting and not previously under cultivation may have been reported as woodland pasture, other pasture, woodland not pastured, or all other land.

Irrigated land.—Includes all land irrigated in 1939. Crops were harvested from part of the land and this area has been designated "irrigated cropland harvested." The acreage figures reported for irrigated cropland harvested are included in the acreages shown for total cropland harvested. Part of the irrigated land was occupied by crops for future harvest and some of it was used exclusively for pasture.

Farms and farm acreage classified by size of farm.—The grouping of farms and farm land by size was made upon the basis of the total acreage in the farm.

Incorporated farms.—These include farms, ranches, and plantations owned by corporations which were incorporated under the laws of some State or Territory of the United States, or of some foreign country. The incorporated farms are operated by managers.

Number of dwellings on incorporated farms.—The number of dwellings reported represents the number of dwelling units only on farms reported as incorporated. The dwellings include not only those occupied by the farm operator but also by laborers and others living on the farm, ranch, or plantation.

Farm values.—The enumerators were instructed to obtain from each farm operator the total value of the farm (land and buildings). This total value was to be the amount for which the farm would sell. However, the value of plantations comprises a large part of the value of all farms in Hawaii and as these large plantations, under the existing system of land tenure, are seldom if ever sold, the values reported represent in most cases book values or assessed values. Many of the plantations have large irrigation systems with extensive canal systems, forested water sheds, etc., and undoubtedly the value of these improvements has been included in the value of the

CENSUS OF AGRICULTURE-HAWAII

plantations. Also, the farm, ranch, and plantation area includes considerable areas of land leased from the Government of the Territory of Hawaii. As these territorially owned lands are not usually sold, it was necessary for the census enumerators to estimate their values. The value of sugarcane, pineapple, and other perennial crops for future harvest has been included in the total value of the farm.

The operator was also asked to give the value of all farm buildings on the farm. These values were necessarily the nearest approximation the farm operator could give, and the figures obtained are probably somewhat less satisfactory than the figures for the total real-estate value. Therefore, the value of the buildings should not be subtracted from the total value of the farm and the difference assumed to represent accurately the market value of the land alone.

The value of the operator's dwelling house represents the value of the building used by the operator of the farm as a dwelling. In case the operator's dwelling was not located upon the farm, ranch, or plantation, but elsewhere, no value was to be reported.

Finally, the operator was asked to place a value on the farm implements and machinery used in operating the farm, ranch, or plantation. This was to represent the present market value and was to include not only the farm implements but also the tools, automobiles, tractors, motortrucks, trailers, wagons, harnesses, dairy equipment, and all other farm machinery. However, plantations own a major part of all farm machinery and equipment in Hawaii. The reported value for farm machinery and equipment for plantations usually represents the book rather than the market value, and includes considerable amounts of equipment, especially on sugarcane plantations and on irrigated farms, not usually found on other types of farms.

Farm mortgage debt.—The farm mortgage inquiries on the 1940 Farm, Ranch, and Plantation Schedule were to be answered by operating owners only. Tenants and managers, in many cases, would not know whether the farms they were operating were mortgaged and would be even less likely to know the amount of the mortgage and the contract rate of interest. The inquiries read as follows:

Was there outstanding on April 1, 1940, any mortgage debt on the land and/or buildings of this farm owned by you?-----
(Yes or No)

How many acres were covered by mortgage?-----

Total amount of such mortgage, including interest past due and unpaid-----\$-----

What was the annual rate (contract rate) of interest on the first mortgage debt?-----
(Percent)

The mortgage information given herein for part owners (operating owners who rented some land from others) relates only to the portion of the farm owned by them, and, as for tenants, no attempt was made to secure the facts as to debt on the rented land. As noted in the questions above, the annual interest rate should represent the contract rate on the first mortgage debt. Instructions were given to the enumerator that the rate should be the one specified in the first mortgage.

In county table IV, figures are given for an item labeled "Average rate of interest." These figures represent weighted averages.

Work off farm.—Many operators of farms obtain additional income from personal services performed off their farms. In some cases the operator supplements his farm income with odd or spare time jobs on sugarcane plantations, pineapple canneries, etc.; in many other cases his farming activities are only secondary, his off-farm job being his principal source of income. The inquiry carried on the General Farm and Ranch Schedule ascertained the number of days the operator worked off his farm for pay or income and, of these days, the number spent (a) on another farm, ranch, or plantation, where he was employed by someone else and (b) at jobs, businesses, or professions not connected with any farm. Instructions were given to the enumerators that this question was intended to secure a record of all time spent off the farm in 1939 for pay, income, or profit. Work of the operator in connection with a filling station, garage, pineapple cannery, or other nonfarm business conducted at the farm was considered as work off the farm and

should have been reported under section "b" of the question. An effort was made to get a positive report as to off-farm work from every operator. If there was no off-farm work, an answer of "None" was to be supplied. However, the enumerator could not always supply an answer to this question.

Age of operator.—Farm operators have been classified by age and the absolute figures for six age groups are shown, by tenure and race of operator, in Territorial table 5; some averages are also given in this table. These averages were obtained by making a summation of the ages reported by all operators for a given tenure and race group and dividing this total by the number of operators reporting their age for that group.

Year of occupancy.—The question on the 1940 schedule, "Year when operator began to operate this farm....(Year)," reflects, in part, the stability or instability of operators on a particular farm. No account was taken as to whether the operator had ever had previous farm experience; for example, if an operator began operating his farm in 1940, it may have been the first time he was ever gainfully employed and not that he was unstable in his term of occupancy and had moved recently from another farm. In making comparison between the tenure classes as to the length of time the operators had been on their farms, it is well to consider the average age of the operators in the same tenure classes. In Territorial table 6, averages are presented for operators classified by race and tenure, and in county table V averages are presented for operators classified by tenure. These averages were obtained by making a summation of all years reported for a given class and dividing the total by the total number of operators reporting for that class. The resulting quotient was shown as a whole number; for example, when the average came to something in excess of 1928 but not as much as 1929, the average year would be shown in the table as 1928.

Farm labor.—Many and insistent demands produced the labor inquiry which comprised a part of the agricultural schedule for 1940. Several types of information were desired. Some persons wished to secure data which would show the varying supply and demand for labor at various seasons of the year. Others wished to obtain similar information by the type of labor hired, that is, whether hired or available for hire by the month, day, or on a piece work or contract basis. The amount paid for various classes of labor was also wanted.

In presenting the data, the cash expenditures for labor have been listed along with other farm expenditures. It should be noted that the expenditures for farm labor represent the amounts paid in cash and includes the amount paid for farm managers and other supervisory employees working on the farm, ranch, or plantation. For certain types of labor, cash payments are often supplemented with the furnishing of board, housing, electricity, products of the farm for the use of the laborer's family, or feed and pastureage for animals.

Farm expenditures.—As noted in the foregoing paragraph under farm labor, the inquiry for that item specified expenditures in cash. For all other expenditures, it was pointed out in the instructions to enumerators that cash paid out and other obligations incurred during 1939 for all specified goods and services used on the farm should be included. In the case of a tenant-operated farm, contributions made by the landlord, as well as those made by the tenant operator, were to be included.

The inquiry for the amount expended for feed for livestock and poultry included also expenses for salt, condiments, and mineral supplements. Expenditures for manure and fertilizer included also expenses for liming materials.

Farm machinery and facilities.—In 1940, an inventory record was made for the number of automobiles, motortrucks, and tractors on each farm. The enumerator was cautioned to include automobiles owned by employees living on the farm, ranch, or plantation. For each of these three general classes of equipment, the year of latest model on the farm was to be recorded. The number of farms reporting each model is presented by tenure of operator and by individual year of model beginning with the most recent model and extending to those approximately 10 years of age. For all older models the number of farms reporting is shown in one group. Such data are presented in Territorial table 7. In county table VI the year of latest model is given for two 5-year groups and for a third group in which all older models fall.

CENSUS OF AGRICULTURE—HAWAII

5

Livestock and livestock products.—For convenience, the term "livestock" in the Census Reports is made to include not only domestic animals such as horses, mules, carabaos, cattle, swine, sheep, and goats, but also poultry and bees. It follows, then, that the term "livestock products" should include production from the above classes of livestock.

In making comparisons between the various census years for any particular class of livestock shown in the accompanying tables, several points should be kept in mind, two of which are:

(1) It is characteristic for some classes of livestock to change in numbers between years through rather definite cycles, i. e., from a low point to a high point and back again over a period of years. These cycles often follow price changes. A census taken every 10 years might fall at different points of the cycle and thus interfere with the determination of long-time trends. Cyclical changes have an effect on the volume of production of livestock products.

(2) A variation in the months of enumeration affects the comparability of the statistics for most kinds of livestock,

again making it difficult to determine the trend in numbers between census periods. As noted in the livestock tables, the 1940 and 1930 censuses were taken as of April 1; the 1920 census as of January 1; the 1910 census as of April 15; and the 1900 census as of June 1. In the period from January 1 to April 1 (or April 15 or June 1) changes are taking place in the numbers of each class of livestock because of decreases from farm slaughter, deaths, and marketings during this three-month, or longer, period and due to increases resulting from births and purchases. The net effect of these influences cannot be readily appraised.

The inquiries for 1940 were so worded that, when considering young animals and poultry, inclusions were made for colts and calves over 3 months of age, pigs and kids (goat) over 4 months of age, lambs over 6 months of age, and poultry over 4 months of age, on the date of the census. Because of the varying age groups included in the different census years, a tabulation appears as a part of this text presentation showing to what age groups the numerical data refer. The tabulation is confined to the material appearing as part of this bulletin.

AGE, SEX, AND OTHER GROUPS ENUMERATED FOR VARIOUS CLASSES OF LIVESTOCK, 1940, WITH APPROXIMATELY COMPARABLE GROUPS, 1900 TO 1930

ITEM	1940 (April 1)	1930 (April 1)	1920 (January 1)	1910 (April 15)	1900 (June 1)
Horses and colts—					
farms reporting—	Over 5 mo. old.	All ages.	All ages.	All ages.	All ages.

¹ Not available.

CENSUS OF AGRICULTURE—HAWAII

In theory, a change in the date of the enumeration should have little effect on the volume of production of livestock products reported for the previous calendar year. However, experience indicates that, when accurate records of production are not kept, daily production of milk and of eggs at the time of the enumeration does affect the total volume reported for a year.

Goats and kids.—The inquiries for goats in 1940 first required a total for those over 4 months of age and then a separation into "Angoras" and "Other." No Angoras and no mo-hair were reported.

Hogs and pigs.—In 1940, the inventory of hogs and pigs on hand excluded those born after December 1, 1939. The census of 1910 enumerated all hogs and pigs over 3 1/2 months of age with a separate inquiry for those under 3 1/2 months of age. However, for comparative purposes, the data presented in Territorial table 8 for this earlier census excludes those under 3 1/2 months of age. Data for all other censuses are for hogs and pigs of all ages as enumerated.

Poultry.—To be counted in 1940, all poultry on hand on the census date had to be over 4 months of age. The censuses of 1930 and 1920, enumerated fowls of all ages and the census of 1910, taken on April 15, limited the inventory of all fowls to those over 3 months of age.

Miscellaneous poultry.—Separate inquiries were carried on the 1940 General Farm, Ranch, and Plantation Schedule for chickens, turkeys, and ducks. Another inquiry was provided for other classes of poultry. The names of other classes of poultry were to be given along with the numbers on hand over 4 months old on April 1, 1940, and the numbers raised in 1939.

Farm slaughter and purchases and sales of livestock.—Data are shown for four separate kinds of animals butchered, namely, cattle, excluding calves; calves; hogs and pigs; and sheep and lambs. Animals butchered off the farm on a custom basis, or otherwise, for use on the farm were to be reported by the operator of the farm for which the animals were butchered.

For purchases and sales, data are shown in county table IX only, for four specific classes of animals, namely, cattle, excluding calves; calves; hogs and pigs; and sheep and lambs. Data are also presented therein for the farms reporting the purchase or sale of cattle and/or calves.

Bees and honey.—Beekeeping has been considered as an agricultural operation. In 1940 two questions were carried in regard to the number of hives of bees. The first related to hives on a farm on April 1 which were owned by someone other than the farm operator, and the second related to hives owned by the farm operator whether kept on his farm or on nonfarm land such as deserts, hills, swamps, etc. Data for each of these two groups are presented in county table IX, at the beginning of which totals for the Territory are carried. If the number of farms reporting hives of bees for each of these groups are added, the total may differ somewhat from the number of farms reporting hives of bees shown in Territorial table 8 since the figures shown in Territorial table 8 for this item represent the number of farms having bees regardless of whether owned by the operator or by others but kept on farms.

Crops.—With the exception of vegetables and fruits and nuts, three separate inquiries were made for each crop—namely, acres in crop, acres harvested, and quantity harvested. Acres in crop include not only the acres harvested, but also the acreage in the crop during 1939 for future harvest as well as the acreage planted in the crop for harvest in 1939, on which the crop failed. The acres harvested and quantity harvested usually refer to the calendar year 1939, but in some cases, such as sugarcane, they refer to the acres and quantity harvested during the crop year (which does not exactly correspond to the calendar year). For forage crops, such as alfalfa, the acres harvested represents the actual acres from which the crop was harvested, as the acreage was counted only once when more than one harvest of the same crop was made from the same land during the year. Field crops and forage crops not specifically called for on the schedule were to be reported under the inquiries "Other field crops" and "Other forage crops." However, as indicated by the data, other field and forage crops are relatively unimportant.

Vegetables.—Information is given for the farms reporting, acreage, and value of the individual vegetables harvested for sale. Data for Irish potatoes, sweetpotatoes, taro, and cassava are given under field crops.

Horticultural specialties.—The area in trees, vines, bulbs, flowers, and field and garden plants grown for sale was included under this classification and the value of sales in 1939 was obtained.

Fruits, coffee, and nuts.—Land in fruits, coffee, and nuts comprises the area occupied by all fruits and nuts, including coffee and pineapples on April 1, 1940. Separate inquiries were made for the four most important groups of crops included in this total area, namely: Bananas, citrus fruits, coffee, and pineapples. For most individual fruits and nuts, separate inquiries were made as to the number of trees of bearing age and not of bearing age on April 1, 1940 and the quantity harvested in 1939.

VALUE OF FARM PRODUCTS SOLD, TRADED, OR USED BY FARM HOUSEHOLDS

The 1940 schedule included eight definite over-all questions relating to the value of farm products sold, traded, or used by farm households. In addition, the value of each specified vegetable sold or traded was obtained. These latter items were totaled in the Washington Office, making in reality nine major value questions. These questions in the order of their appearance on the schedule were as follows:

1. Value of all crops produced in 1939 that were or are to be paid to landlord, sold, or traded.
2. Value of vegetables harvested in 1939 for sale.
3. Value of all fruits, coffee, and nuts produced in 1939, that were or are to be paid to landlord, sold, or traded.
4. Value of sales in 1939 of trees, vines, bulbs, flowers, and field and garden plants grown for sale. For brevity, this group has been designated as "Horticultural specialties" in the statistical tables.
5. Value of all dairy products (milk, cream, butter, cheese, etc.) sold or traded in 1939.
6. Value of all livestock (except poultry and bees) sold or traded in 1939.
7. Value of all poultry, eggs, baby chicks, poult, etc., sold or traded in 1939.
8. Value of wool, mohair, meat, hides, etc., and honey and wax produced in 1939 that were or are to be sold or traded and bees sold in 1939.
9. Value of commodities produced on this farm in 1939 that were used by your family on or off the farm and by other households if any on this farm (meat, milk, poultry, eggs, honey, vegetables, fruits, fuel wood, etc.).

Unclassified farms.—When the figures on crop and livestock production and values were incomplete or when no products were reported as sold, traded, or used by farm households, the farm was shown as "Unclassified."

Farms reporting total value of farm products sold, traded, or used by farm households.—This represents all farms for which there were usable reports on value of products, but excludes reports for unclassified farms. In other words, the number of farms reporting total value of products plus the unclassified farms equals all farms enumerated as of the census date.

Field crops.—This question covers the value of the sales of field crops such as corn, cotton, Irish potatoes, sweetpotatoes, sugarcane, rice, peanuts, taro, cassava, etc. Inasmuch as sugarcane was not sold as such it was necessary to estimate the farm value of the sugarcane produced.

Vegetables for sale.—The values reported for this item, as just noted, represent an addition for each individual farm of the values reported for individual vegetable crops harvested in 1939 for sale. Irish potatoes and sweetpotatoes, taro, and cassava were not included under vegetables, but under field crops.

Fruit, coffee, and nut crops.—In general the figures reported for the question covering these crops relate to the value of all fruits, coffee, and nuts produced in 1939 that had been or were to be sold at the time of the census enumeration. The value of the sale of pineapples has been included in the value of fruit, coffee, and nut crops.

CENSUS OF AGRICULTURE—HAWAII

7

Horticultural specialties.—The values reported for this item represent the sales in 1939 of trees, vines, bulbs, flowers, and field and garden plants.

Dairy products.—As previously mentioned, this question called for the value of all dairy products sold or traded in 1939. Separate inquiries were made as to the value of butter sold, whole milk sold, and cream sold. The value of dairy products purchased for resale was to be excluded, both from this value question and from the preceding items on quantities and values of butter, whole milk, and cream sold.

Livestock.—This value question immediately followed two types of livestock questions, one relating to the number of animals purchased and the other to the number of animals sold for each of the following: Cattle, calves, hogs and pigs, and sheep and lambs. The question, by wording, excluded the value of poultry and bees sold. The enumerator was instructed to explain if animals, other than the kinds listed in the preceding questions, were sold, the intention being that the value question should cover also sales of other kinds of livestock such as horses, mules, and goats. The statistics for this item represent, therefore, the totals of individual farm sales regardless of whether or not the animals were produced on the farm for which the sale was reported. The value of slaughtered animals sold was to be reported under other livestock products.

Poultry and poultry products.—As previously noted, hatcheries were included in the list of types of specialized agriculture for which schedules were required and the enumerator was instructed to explain whenever the value entry for this question appeared high as a result of sales of baby chicks, pouls, hatching eggs, etc.

Other livestock products.—The term "Other livestock products" is used in this bulletin to indicate the miscellaneous livestock products question, the wording of which was as follows: "Value of wool, mohair, meat, hides, etc., and honey and wax produced in 1939 that were or are to be sold or traded, and of bees sold in 1939." The value of meat sold applies to slaughtered animals sold off farms or sold to employees living on the farm, ranch, or plantation.

Farm products used by farm households.—As mentioned previously, this question called for the value of commodities of the farm in 1939 that were used by the operator's family and by other households on the farm. The following items were listed individually under the schedule question: Meat, milk, poultry, eggs, honey, vegetables, fruits, fuel wood, etc. The value of these products were to be estimated on the basis of the price that the farm operator would have received for the respective products if he had sold them. Farm products of institutional farms, which were used by inmates of the institution, were considered as sold, and the value was included under the eight other value of products items where applicable.

F FARMS CLASSIFIED BY MAJOR SOURCE OF INCOME

In making the tabulation by major source of income, the schedules for farms reporting farm products sold or traded or consumed by farm households were sorted into 17 groups on the basis of the 9 value of products groups and the kinds of crops harvested and types of livestock or livestock products sold. The basis for this classification was primarily the largest value of products entry. However, farms with the largest value of products entry of (1) field crops; (2) fruit, coffee, and nut crops; (3) livestock and livestock products; were further classified on the basis of the major crop or kind of livestock contributing to the largest value of products entry.

The 17 groups of farms separately classified on the basis of major source of income were:

A. Farms reporting the largest value of products entry for field crops:

(1) Rice farms (2) taro farms (3) sugarcane farms

(4) other field crop farms. These include farms on which the sale of cotton, Irish potatoes, peanuts, and/or field corn provides the major proportion of the value of products entry for the field crops.

B. Other crop farms:

(5) Vegetable farms. These comprise farms on which the largest value of products entry represented the value of vegetables harvested for sale.

(6) Horticultural specialties farms. Farms on which the largest value of products entry represented the sale of trees, vines, bulbs, flowers, and garden plants were classified as horticultural-specialties farms. Most of these farms were reported in Honolulu County.

C. Farms on which the value of fruits, coffee, and nuts represented the largest single value of products entry:

(7) Pineapple farms (8) papaya farms

(9) banana farms (10) coffee farms

(11) other fruit and nut farms. These comprise farms on which the value of citrus fruits, avocados, macadamia nuts, etc., represented the major part of the value of products entry for fruits, coffee, and nuts.

D. Farms with livestock and livestock products as the largest source of the value of products reported:

(12) Hog farms. These represent farms on which the total value of hogs and pork comprised the largest source of income.

(13) Beef cattle farms. These comprise farms on which the sale of beef cattle and beef represented the largest source of income.

(14) Dairy products farms. Farms on which the value of all dairy products represented the largest single value of products entry.

(15) Poultry and poultry products farms. These represent farms on which the value of all poultry, eggs, baby chicks, pouls, etc., constituted the largest value of products entry.

(16) Other livestock and livestock products farms. Farms on which the sale of sheep and lambs, bees, honey, goats, and wool comprised the largest major source of income were classified in this group.

E. Farms on which the estimated value of products produced on the farm and used by the family of the farm operator or by other households on the farm were classified as:

(17) Farms with major source of income as farm products used by farm households.

F FARMS CLASSIFIED BY TOTAL VALUE OF PRODUCTS

This classification includes only farms reporting value of farm products sold, traded, or used by farm households. Unclassified farms were excluded. Each farm was classified on the basis of the total value of all farm products sold, traded, or used by farm households.

Interpretation of the value of product statistics.—In general the statistics on total value of farm products sold, traded, or used by farm households represent an approximate measure of gross-farm income. If the value of farm products used by farm households is excluded from the totals, the resulting figures on value of farm products sold or traded represent an approximation of cash farm income.

Unclassified farms.—As has been pointed out previously, the tabulations of value of farm products sold, traded, or used by farm households, for 1940, exclude the value of products for the "unclassified" farms. The extent of this incompleteness is shown by counties, both in number of farms and in percent of all farms, in county table XIII.

Net income.—The figures on specified farm expenditures, shown in county table VI, should not be deducted from the figures on value of products sold, traded, or used by farm households in an attempt to arrive at statistics on "net" income. Census figures are not available for many important farm expenditure items such as cost of irrigation, containers, sprays, seeds, livestock purchased, etc.

Nonagricultural income.—Income from nonagricultural sources is not included in the figures on farm income for the 1940 census enumeration. Because of the growth of part-time farming in recent years, nonagricultural income is an important item when comparisons are made involving the economic position of the individual farmer rather than farming as an industry. There was no provision on the 1940 Farm, Ranch, and Plantation Schedule for reporting the amount of government benefit payments.

155. Calves sold alive in 1939. Number.	XXXXXX		
156. Hogs and pigs bought in 1939. Number.	XXXXXX		
157. Hogs and pig's blood alive in 1939. Number.	XXXXXX		
158. Sheep and lambs.	XXXXXX		
159. Sheep sold alive in 1939. Number.	XXXXXX		
160. Value of all livestock (except poultry and birds) sold or traded in 1939. \$.	XXXXXX		
Poultry and eggs			
Quantities of all live stock poultry purchased at least as old as the day it was hatched on farm.			
161. Chicks on hand April 1, 1940, hatched before December 1, 1939. Number.	XXXXXX		J
162. Chicks raised to marketable age in 1939. Number.	XXXXXX		1
163. Turkeys on hand April 1, 1940, hatched before December 1, 1939. Number.	XXXXXX		2
164. Turkeys raised to marketable age in 1939. Number.	XXXXXX		3
165. Ducks on hand April 1, 1940, hatched before December 1, 1939. Number.	XXXXXX		4
166. Ducks raised to marketable age in 1939. Number.	XXXXXX		5
167. Geese on hand April 1, 1940, hatched before December 1, 1939 (specify). Number.	XXXXXX		6
168. Other poultry raised to marketable age in 1939 (specify). Number.	XXXXXX		7
169. If this farm had chickens on hand but no eggs produced no eggs in 1939. Number.			
170. Chickens eggs produced in 1939. Dozens.	XXXXXX		8
171. Value of all poultry eggs, baby chicks, poults, etc., sold or traded in 1939. \$.	XXXXXX		9

XII.—LIVESTOCK AND LIVESTOCK PRODUCTS—Continued

	Quantity	Value	CODE
172. Hives of bees owned by persons other than the operator of this farm, but kept on the farm. Number.	XXXXXX	J	
173. Hives of bees owned by operator of this farm and/or on non-farm land. Number.	XXXXXX	K	
174. Honey produced by operator of this farm. Pounds.	XXXXXX	L	
175. Value of wool, mohair, meat, hides, etc., and honey and wax produced in 1939 that were or are to be sold or traded, and of bees owned in 1939.		M	

XIII.—FARM PRODUCTS CONSUMED

	Quantity	Value	CODE
176. Value (estimated) of commodities produced on this farm in 1939 that were used by your family (on or off the farm) and by other household (if any) on this farm (meat, milk, poultry, eggs, honey, vegetables, fruits, fuel wood, etc.).	\$	N	
		(Gross value)	

XIV.—SUPPLEMENTAL INFORMATION

Specify any changes in the area of this farm or in your tenure since September 1939. If none, write "None."

Clarify any unusual entries in this report by adequate explanations below. In particular, comment on unusual crops, yields, values, acreages, locations and methods of cultivation.

If the answer to Question 15 shows acreage from which no crop was harvested because of failure, etc., specify kind and acreage of each crop which had been planted for harvest in 1939 but was not harvested because of crop failure, destruction, or low prices. Do not report as failure any crops that were planted, hogged off, or otherwise harvested for any purpose.

If any or the principal crops were harvested in 1939, give acreage and name of principal crop and of interplanted crop.

If this farm or plantation lies in two or more Judicial Districts, give below the names of the Judicial Districts and the number of acres of that part lying in each.

	Judicial District	Acres	Judicial District	Acres	CODE

EXPLANATIONS AND INSTRUCTIONS

1. Definition of "farm."—A farm, for Census purposes, consists of one or more tracts of land (not necessarily adjoining) on which some agricultural operations are performed or are intended to be performed. The land may be owned by the farmer, or another, or by a partnership. The land operated by a partnership is likewise treated as a farm. If a farm consists of two or more tracts of land, these may be held under different tenures, as well as owned by different persons. When a farm is owned by one person, the land may be operated by another, or by a manager, or by a tenant. The land operated by each cropper, renter, or tenant should be reported as a separate farm, and the land operated by the owner or the manager by means of wages should likewise be reported as a separate farm. Do not report a farm consisting of two or more tracts of land unless its agricultural products in 1939 were valued at \$100 or more.

2. This schedule is to be used for enumerating all farms, ranches, plantations, and special agricultural operations conforming to the definition of "farm." Special care should be taken to record all operations which fall within the scope of the definition, whether or not clearly enough so that there is any doubt. This applies to individual operations, farms, ranches, plantations, establishments, city, town, and village dairies, and all other special agricultural operations if 5 acres or more of land is used or if the products in the census year were valued at \$100 or more.

3. General method of filling out schedules.—Take care to write legibly, and to print, or make figures so that they can be read at a glance. Be sure to type your key number, entry and where it should be made before making it, to avoid mistakes.

4. Source of information.—Obtain information with regard to a farm from the farm operator in every case where this is possible. If it is necessary to accept the statements of a member of his family, or of some other person, be sure to have the name of the informant and his relation to the operator.

5. Farmowner's records.—Fill out carefully the blank spaces in the heading of the schedule. Enter the names of the island and county, and write in full the name of the judicial district in which the farm is located. Do not abbreviate. The number of the enumeration district must appear in its proper place, and the name must be checked off with a mark corresponding with No. 1 and continuing in order through the enumeration districts. The date on which the farm was enumerated and your signature complete the entries in the heading of the schedule. All figures must be legible and reasonably large.

6. All questions to be answered.—Give the information asked for on the schedule, and for all the inquiries that apply to the farm being canvassed. Inability to obtain exact answers to all the questions does not affect the value of the information obtained. The answers should be given in full, even if nearly accurate returns that the circumstances permit must be obtained. If farm records or accounts are kept, take the figures from these. If such records are not available, careful estimates should be made in all cases to obtain the information desired. When there are no crops or animals corresponding to the names listed in the schedule, leave the space blank. Fill in the blank spaces in the schedule correctly, in Section I, the name of the farm operator, and the valuation statement of his household, as they appear on the Population schedule. Make no entries in space marked thus: "x x x."
